Zahra Habibnejad
Senior Expert, Amirkabir University of Technology, Tehran, Iran

About the Journal

AUT Journal of Mathematics and Computing is a double-blind peer-reviewed Quarterly journal published by Amirkabir University of Technology (AUT). The journal is published under open access policy, published articles are archived online on the website and can be accessed for free. The journal welcomes original research articles, review papers, case studies and communications from scholars around the world.

Open Access Policy:

AUT Journal of Mathematics and Computing is a libre green open access journal. This policy facilitates the widest possible dissemination of your work with no fees. The open access material on our website is subject to the terms and conditions of the Creative Commons Attribution-NonCommercial 4.0 Generic (CC BY-NC 4.0) license. Authors can self-archive their articles or post a free copy of their article on a repository or website after it's been made available on our website provided that appropriate credit is given to the formal publication on our website using the correct citation and uniquely assigned DOI of the article.

Article Processing Charges:

AUT Journal of Mathematics and Computing doesn't have any submission or article processing charges (APCs).

Author Guidelines

Article Submission:

All researchers are requested to send a LaTeX and PDF files of their manuscripts via the journal website (ajmc.aut.ac.ir) submission system in accordance with the manuscript guidelines. The submitted manuscripts are not accepted if they have been formerly published or under consideration for publication anywhere else. Furthermore, the authors of the article are held responsible for the validity of the contents of the article.

Peer Review of an Article:

Highly acclaimed reviewers assess all the articles. Prompt response of the authors to the corrections and revision requested by the reviewers will result in shorter evaluation time. It is necessary to highlight all the corrections applied to the article in yellow so that the reviewers are able to assess the revised article within the shortest time possible. Please note that the type of review is "Double-Blind Peer Review" and reviewers comments are considered highly confidential and the authors will view reviewers comments only, questions and requests under the anonymous titles of “reviewer1” and “reviewer2”. Also, the reviewers are not aware of the authors names and identities.

The General Format of The Article:

The size of the pages should be A4. The text should be written in a single column.

The Main Text:

The article should be written in the format of LaTeX. Each article is divided into various sections as mentioned below:

The Title:

The title should include a maximum of fifteen words and determine all the features of the research. Use of abbreviations in the title should be avoided.

The Authors’ Names:

The authors’ names should be written in one line following the title of the article. In additions, the authors have to mark the corresponding author’s name using an asterisk (*) on top of his/her name in the list of authors. The corresponding author must be a faculty member.

The Authors’ Personal Information:

The authors’ information should include their scientific degree, the name of the faculty and university, city and country. This information should be written in one line for each author and referred to the author mentioning the number.

Abstract:

The abstract should clearly state the topic and the results of the research carried out in a 150-to-250-word paragraph. In other words, the significance of the subject, the necessity of carrying out this research and a summary of the method and significant results of the research should be stated in the abstract. Including details, tables, illustrations, mathematical equations and if possible, referencing should be avoided.

Keywords:

The number of keywords presented at the bottom of the page must be 5 words.

MSC Codes:

The 2010 MSC codes should be mentioned on the title page after the keywords.

The Introduction:

In this section, primarily the general aspects of the subject should be stated and afterwards a summary of the history of the subject and the studies carried out accompanied by their features should be explained (in a way which clarifies the importance of it for the reader.) Then the innovation and contribution of the research should be explained in one or two paragraphs.

Main Body:

Each article should include at least one section placed after "Introduction" and before "References". Herein, we refer to these sections as "main body". The main body may contain the description of the problem proposed, the necessary notions and definitions, the solution methods, the theoretical or experimental results, conclusion, acknowledgement, etc. The title and arrangement of those sections constructing the main body of the article can be determined with respect to the authors' preferences.

Acknowledgements: (if needed)

In this section, the authors may express their appreciation to the supporters of the research who have indirectly contributed to its development.

References:

The references may include books, articles from scientific journals, patented inventions, conference articles, theses, technical reports, educational workshops, valid websites and other reliable sources. Referring to unpublished reports, rejected articles and other invalid sources should be avoided. The list of references should be included at the end of the article in English in order of appearance in the text. All the references should be referred to in the main text of the article only by using their number in the reference list in brackets (e.g. [1]) and it is not needed to mention the word "reference" before it (e.g. reference [1]) unless a sentence starts with these words (e.g. in reference [1] ….). In order to refer to two references or several references with nonconsecutive numbers, authors should use commas. Fore referring to several references with consecutive numbers, they should use a dash (e.g. [1, 2], [12-15], [2, 9, 6] or [1, 3-4]).

The Figures:

The schemata, charts, and images used should all be titled "illustration" and be centered in the text. The figures used in the article should be of acceptable quality. After the peer review process and acceptance of the article, the illustrations should be sent separately with a quality of at least 300 pixels/inch and in the TIFF or JPEG format. The label of each axis in the charts should be mentioned with the measurement unit written in parentheses after it separated by a comma.

The Tables:

The contents of the tables should be written in English in the center and if captions are used in the tables, they should be located under the corresponding table. The tables should not be presented in the image format.

Measuring Units:

The accepted measuring unit is the SI system and if necessary, the equivalent in another measuring system may be mentioned in parentheses.

Plagiarism Check:

This journal use iThenticate Plagiarism Detection Software to avoid plagiarism in published papers.
